

## Fluido® In Urology

*F.C.H d'Ancona , MD; PhD; Urologist  
University Medical Center St. Radboud, Nijmegen, The Netherlands.*

The department of urology of the University Medical Center St. Radboud, Nijmegen, The Netherlands is one of the largest urology departments in the Netherlands. Dr. d'Ancona has a focus on minimal invasive and laparoscopic procedures.

Since several years the Fluido (The Surgical Company International B.V., The Netherlands) is used in endo-urologic procedures to avoid hypothermia.

Hypothermia can cause wound infections, clotting- and hemodynamic complications.

F.C.H d'Ancona , MD; PhD; urologist :”The Fluido system has demonstrated to be a user-friendly and very effective fluid warming system, that is used for irrigation in all sorts of endo-urological procedures.

Flow, total volume and temperature are clearly presented in the display of the Fluido.”
